

Creation Unit Study Outline

by Jayme Durant

If you want to take a full school year to do a multi-age-level unit study for the whole family, ICR provides resources for a 36-week creation unit study plan. Here's an outline of an option that will equip not only your students but the entire family. Use the resources in the order presented below to build a foundation of creation basics before you tackle the more difficult topics.

- 12 weeks: *Unlocking the Mysteries of Genesis* DVD series with the accompanying viewer guide and student guide. Use the *Unlocking the Mysteries of Genesis* paperback by Dr. Henry Morris III as an additional reference.
- 12 weeks: *Uncovering the Truth about Dinosaurs* DVD series (4 weeks), *The Universe* DVD series (4 weeks), and *Made in His Image* DVD series (4 weeks), *in that order*. Accompanying viewer guides include questions and answers, key points, and additional resources.
- 6 weeks: *Guide to Creation Basics* (explore each of the six sections of the book); use *Creation Basics & Beyond* and *Creation Q&A* for additional information. View and discuss *Your Origins Matter* DVD.
- 6 weeks:
 - 1) Explore the topics in *Guide to Animals* (multilevel students). View and discuss *Scientific Evidences for Creation* DVD. Go on a field trip to the zoo and/or an aquarium.
 - 2) Explore the topics in *Guide to the Universe* (multilevel students) and *Science for Kids Space: God's Majestic Handiwork* (elementary students). View and discuss *Journey Through Space* and *What You Aren't Being Told about Astronomy* DVDs. Go on a field trip to a planetarium.
 - 3) Explore the topics in *Guide to Dinosaurs* (multilevel students), *Science for Kids Dinosaurs: God's Mysterious Creatures* (elementary students), and *Dinosaurs and the Bible* (older students). View and discuss *Discovering Dinosaurs* DVD. Go on a field trip to a museum and/or a dinosaur park.
 - 4) Explore the topics in *Guide to the Human Body*. View and discuss *The Human Body: Divine Engineering* DVD. Discuss questions and answers in *Made in His Image* book. Go on a field trip to a museum, ballet, athletic event, or circus.
 - 5) For more advanced students, discuss questions and answers in *Clearly Seen*. Discuss problems with evolution using *Twenty Evolutionary Blunders*. For everyone, view and discuss *That's a Fact* DVDs (1 and 2).
 - 6) Your favorites week! Review your favorite books and DVDs, and return to your favorite field trip spots to finish out the year.
- Throughout the year, add writing assignments, science experiments and activities (for example, finding constellations or looking through telescopes), or art projects that enhance that week's lesson and fit with your students' individual learning styles. Plan to attend an ICR event near you. Visit the ICR Discovery Center in Dallas, Texas, when construction is completed—plan to discover foundational creation concepts and the science that confirms biblical truth.
- Subscribe to ICR's monthly *Acts & Facts*. For parents and junior high (and older) students—read and explore the topics in the magazine. Students can write a one-page essay per month (or each week, depending on your child's interests, abilities, and level) about one of the articles that interest them.

Jayme Durant is Director of Communications at ICR. She homeschooled her four children for 22 years, from preschool through high school graduation.

Each of these resources is available through ICR's online store. Visit store.icr.org/homeschool-resources.html or call 800.628.7640 for more information.
